Written for programmers with a background in C++, Java or other high-level languages, this book applies the Deitel signature live-code approach to teaching programming and explores Microsoft's C# language and .NET Framework 3.5 in depth. The book is updated for Visual Studio® 2008 and C# 3.0, and presents C# concepts in the context of fully tested programs, complete with syntax shading, code highlighting, line-by-line code descriptions, and program outputs. The book features 200+ C# applications with about 20,000 lines of proven C# code, and hundreds of tips that will help you build robust applications.
