**Climatology: An Atmospheric Science (3rd Edition)** John J. Hidore, John E. Oliver, Mary Snow, Richard Snow

Taking the study of atmospheric science beyond the daily weather map, *Climatology* explores the broader impacts of weather and climate. The authors cover multiple facets of climate, many of which play a significant role in everyday life—and examine many topics, such as past climates, that are seldom adequately covered in other introductions to the subject. The science behind widely publicized events is explained within the systematic coverage of climate and climatology. The relationships between climate and people are discussed in detail, and readers are shown how common things ranging from wind-chill to architecture are understood in the wider context of climate. In the Third Edition, data and information have been updated throughout and significant coverage is devoted to climate change.

Climatology in the World Today; Energy and the Climate System; Atmospheric Temperatures; Climate and the Hydrologic Cycle; Wind and Circulation Patterns; Atmosphere-Ocean Interactions; Air Mass and Synoptic Climatology; Air Mass and Synoptic Climatology; Climatology of Atmospheric Storms; Natural Causes of Climate Change; Reconstruction of Past Climates; Greenhouse Gases and Global Warming; Climate Change and the Physical Environment; Climate Change and the Living World; Changes in Atmospheric Chemistry; Regional Climates: Scales of Study; Tropical Climates; Mid-Latitude Climates; Polar and Highland Climates; The Human Response to Climate; Climate, Agriculture, and Industry. A useful reference for anyone who wants to learn more about Earth's climate and weather.
